2014 Summering birds listed as	9/1																

8/31 Highlight was a perched Nighthawk. Greg played a Screech Owl call while we were watching the night hawk. All the nearby birds discovered the nighthawk, apparently thought it was the owl, and began mobbing it. Among the mobbers were three Baltimore Orioles.

7/7 A major fall out of warblers arrived on 9/6. Many species in good numbers were also seen today.

7/14 Very good looks at an Olive-sided Flycatcher perched in a bare tree. Some even saw the white patches on its sides. Apparently it has been seen on this same perch earlier this fall.

7/21 Incredible numbers of birds of all shapes and sizes as a fall out of migrants downed by last night's storm.

Pewees were everywhere. Warblers were down low in sunny weed patches. Still challenging to see and identify.

Busey Woods had a Black-throated Blue Warbler. Greg was able to rescue a Chestnut-sided Warbler that had become entangled with a burr plant.

7/28 As I was in Duluth watching hawks, I appreciate the reports from Greg Lambeth and Janet Jokela from this Sunday's walk.

They report a beautiful sunny day with few birds. New for the walk this fall were Brown Creeper, Cape May Warbler, and chickadee. The chickadees are here all year, but must sleep in on Sunday mornings as we haven't seen them till now. Beth Chato

10/5 The park and woods were full of birds, including 7 new species for the fall. Huge flocks of Cedar Waxwings flying over and feeding on wild cherry. Highlight was an Osprey which flew over and then landed in a lakeside tree for Jeff to take its picture. There were 17 species of warbler and a flyover Pine Siskin, adding up to the highest total of species for the fall.

10/12 We began by exploring the new grasslands along the parking lot driveway. There were lots of sparrows there. It's a good addition to the habitat. There were Slate-colored Juncos, Lincoln's, Field and Swamp Sparrows. Greg saw presumably the campus Peregrine Falcon flying over.

10/19 A cold day. It was nice to have some beginning birders along. The woodcock was seen in Busey Woods by Jeff Bryant and his visiting relatives. The fall colors were lovely. Next Sunday is the last fall walk.
The best quess on the 2 puzzling white birds flying low over the park is white dove. Greg has been seein them around town.

10/26 A very quiet day in the beautifully colored woods. However we did pick up 6 new birds for the fall. These included the resident Great Horned Owl and Tufted Titmouse, both residents that hadn't showed up on our fall Sundays. New arrivals were several sparrow species, an indication that migration is winding down. We were rewarded on our return to the parking lot by a flyover V of Double-crested Cormorants. I left before the Busey Woods extension, so may be missing some species. This was the last walk of the fall. See you next March. Beth Chato
